

- Quickly measure the concentration of coolant
- Two measurement modes:  
single measurement and automatic average  
multiple measurement
- Two units: brix and refractive index
- Refer to the refraction factor of coolant, for example:  
the refraction factor of grinding emulsion is 2.1,  
the reading value is 6%, so the actual  
concentration is  $(2.1 \times 6\%) = 12.6\%$
- Automatic power off
